EDUCATION

Bachelor of Science in Computer Science *Expected 2027*

National University of Computer and Emerging Sciences (FAST-NUCES), Karachi — CGPA: 3.8

Rector's List, Gold Medalist, 100% Merit Scholarship

Relevant Coursework: Data Structures & Algorithms, OOP, Database Systems, Operating Systems, Networks, AI

TECHNICAL SKILLS

Languages: C/C++, Python, JavaScript, TypeScript, PHP, SQL, x86 Assembly, Bash, HTML5, CSS3

Frameworks/Tools: React.js (incl. React 19), Node.js, Express.js, Laravel 12, Flask, Electron, Socket.IO, Vite, Tailwind CSS, TensorFlow, Streamlit, Sanity CMS, Git, REST APIs, Docker, Linux, MongoDB, MySQL, SQL Server, Oracle DB, PostgreSQL, SQLite

Core: DSA, OOP, Full-Stack Development, Database Design, System Programming, Machine Learning, API Development, ERP/HR/POS Systems, Biometric Attendance Integration, Payment Gateway Integrations (Stripe, Authorize.Net, GoCardless)

EXPERIENCE

Full-Stack Developer (Sole Developer) — PlanetCare *2026 – Present*

Management Facility ERP & POS — React 19, Laravel 12 (PHP), Electron, Node.js, MySQL, SQLite, Tailwind CSS

- Designed and built a three-component facility-management system for a camp/catering operation: a React web app, a Laravel REST API (30+ models, Sanctum token auth, MySQL + SQLite), and an Electron desktop point-of-sale
- Built an offline-first grocery POS in Electron with a local SQLite store and a background worker syncing sales and stock to the server every 5 minutes; packaged for Windows via NSIS installer
- Implemented a multi-currency, multi-department invoicing engine merging per-department billing sheets (meals, accommodation) into consolidated company invoices
- Integrated ZKTeco biometric attendance devices through BioTime and direct-device sync services for automated timekeeping
- Developed the finance module: expense and payables tracking, voucher accounting, catering invoice automation, and profit & loss reporting
- Added a passport-scanning pipeline that extracts photos and identity data to auto-populate employee records

Planet Care Iraq – HR & Operations Platform — Laravel (PHP), React, Tailwind CSS, PostgreSQL, JWT, Cloudinary, Docker, Railway

- Built an end-to-end HR and operations platform for an oilfield-services company covering employees, payroll, attendance, invoicing, expenses, air tickets, service tickets, document management, and reports
- Implemented payroll with generated PDF salary slips, employee document uploads via Cloudinary, and a full audit log across modules
- Shipped role-based access control (JWT) and admin user management
- Containerized the backend with Docker and deployed to Railway with PostgreSQL and automated release migrations; migrated historical financial data from Excel workbooks into the system

Full-Stack Developer (Sole Developer) — Eastern Palace POS *2026 – Present*

Chinese Restaurant, Kuwait — Node.js, Express, Socket.IO, SQLite (WAL), React, Vite

- Built a browser-based, real-time multi-terminal POS for a Chinese restaurant: waiters order from any tablet on the LAN, with live sync to the billing terminal and kitchen displays over Socket.IO
- Developed a station-routed Kitchen Display System (Hotpot / Kitchen / BBQ / Drinks) with per-send timed tickets and idempotent order submission that tolerates unreliable Wi-Fi
- Implemented billing with split tender (Cash / KNET / Card), promotions, audited discounts and refunds, table move/merge, and 80mm thermal receipt printing

- Added shift and cash management — opening float, cash in/out, and close-of-shift Z-reports (expected vs. counted) — plus automatic 6-hourly database snapshots
- Modeled all money as integer fils to eliminate floating-point currency errors; built a trilingual (English / Chinese / Arabic RTL) owner-editable menu and a public menu API for QR ordering

Frontend Developer (Contributor) — SiRiiL SaaS Website *Apr 2026 – Present*
React, TypeScript, Vite, Tailwind CSS, Sanity CMS

- Redesigned the hero section and revamped the landing page of the product website
- Merged a standalone Enterprise application into the main codebase and built the Enterprise solution page with consistent navigation and CTAs
- Built the Consultancy page with a dedicated booking form

Software Developer (Contributor) — Neon Telecom Billing Platform *2026 – Present*
Laravel (PHP), MySQL / SQL Server, Blade, jQuery; Stripe, Authorize.Net, GoCardless, QuickBooks integrations

- Contributed to a large multi-tenant telecom billing platform serving admin, customer, and reseller portals
- Standardized monetary amount and decimal formatting across the payments, invoices, estimates, credit notes, and commissions modules, including customer-facing portals
- Added billing-status and billing-type search filters to account listings and fixed payment-filter bugs (Payment In/Out mapping, status filtering, recalled-payments toggle)
- Maintained English/Hebrew localization files alongside feature work

ACADEMIC PROJECTS

Full-Stack E-Commerce Platform *React, Node.js, Flask, Oracle DB*

- Built production-ready e-commerce application with 15+ React components, JWT authentication, and role-based access for customers, sellers, and admins
- Developed RESTful APIs (20+ endpoints) and normalized Oracle database (12+ tables) with stored procedures for inventory management

Generative Adversarial Network (GAN) *TensorFlow, Keras, Streamlit*

- Designed custom GAN with double-headed discriminator, improving output quality by 40%; trained on 50,000+ images with optimized pipeline
- Built interactive Streamlit dashboard for real-time visualization and parameter tuning, reducing training time by 25%

Linux Kernel Module — Producer-Consumer System *C, Linux Kernel*

- Developed kernel module (1200+ lines) with priority-based scheduling using semaphores, spinlocks, and IRQ handlers for thread-safe operations
- Implemented sysfs/debugfs interfaces for real-time configuration and debugging without recompilation

Network Load Balancer & Algorithm Optimization *C++, Python*

- Implemented load balancer with Round Robin, Least Connections algorithms; achieved 35% improvement in traffic distribution across 5+ nodes

LEADERSHIP & ACTIVITIES

- Head of Graphic Design — FAST Robotics Society | Head of Design — Developer Student Club | Co-Head Marketing — Entrepreneurship Society
- Community Service: Organized donation drives raising Rs. 67,000+ for medical services
